

Global Insight

Truck Industry Analyst

London

Global Insight is a dynamic consulting firm with a 40-year history and over 450 staff worldwide. We provide research and analysis and offer consulting advice to our clients in business, financial and government organisations around the world.

The Global Automotive Group consists of multilingual experts with credentials in all aspects of the automotive industry. We help OEMs, component manufacturers, financial organisations, transportation companies, and other suppliers accurately evaluate the business environment. Our clients turn to us for a broad range of automotive industry expertise including forecasts, analysis, data and customised solutions to business problems.

Demand for our services means there is now an opportunity for an experienced Truck Industry Analyst to join us. Our existing capabilities have earned us a reputation for accuracy and integrity in this close-knit industry and we wish to build upon it.

You will analyse and forecast key developments in selected heavy truck markets; follow truck manufacturers' global strategies, investment and production plans. The primary focus will be to develop accurate and timely forecasts of demand and production with written analysis for our truck and light truck publications. Additionally, you will provide key support to Richard Wallis, Global Insight's chief truck industry analyst, ensuring timely input of regular reports and maintenance of truck databases, assist in global forecast consolidations, provide direct client support and undertake special project assignments. You should have at least three years of practical industry experience, ideally with a component supplier or OEM, and an established record in forecasting or industry analysis. Education should include a relevant degree and preferably a postgraduate qualification. A second European language, although not essential, would be a distinct advantage.

As one of the team at Global Insight you will enjoy levels of challenge, recognition and opportunity that can truly satisfy the career-minded. For more information and to apply please contact our advising consultant, IBL Recruiting, quoting reference IBLTA1003.
