Current Northeast Paleoethnobotany II

edited by John P. Hart

New York State Museum Bulletin 512

213 pp., 56 figs., 41 tpls. 2008

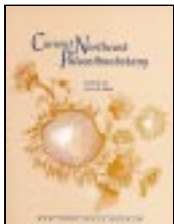

In northeastern North America our understandings of prehistoric human-plant relationships, the subject of paleoethnobotany, continue to change as more samples are taken, examined, and compared to extant records.

This volume presents current work in this vital field of inquiry. Its chapters reflect how paleoethnobotany in the Northeast is changing to include the analysis not only of macrobotanical, but also microbotanical, remains and new theoretical developments in our understandings of prehistoric human-plant relationships. Collectively, the chapters in this book provide a sense of the breadth of paleoethnobotanical research being carried out in the Northeast and serve as a benchmark by which progress in the field can be measured in the decades to come.
