

Introduction to Carbon Footprinting

Be it to better manage your resources and save money, to reduce emissions as part of an environmental management system (EMS) or as part of your corporate social responsibility reporting, carbon footprinting is now an essential element of environmental and sustainability management.

Reducing your carbon footprint can lead to many benefits; adding value to your organisation's image and complying with legislation. By establishing your carbon footprint you will be able to identify, prioritise and implement carbon reduction opportunities.

This training will help you understand the drivers for carbon footprinting and how to approach it for your institution. With a useful mixture of exercises, discussions and case studies, the workshop will teach you how to measure the carbon footprint of your organisation and the steps you can take to reduce carbon emissions.

This workshop will:

- Explain the benefits of carbon footprinting
- Show delegates how to calculate their institution's carbon footprint
- Discuss how to reduce carbon footprints
- Provide practical examples from other institution's

Who Should Attend:

- Estates Managers
- Design Teams
- Waste Managers
- Facilities Managers
- Project Managers
- Organisations working with the sector

22 October 2008
University of Leeds
