

## Vacancy • Postdoctoral Research Position in Soil Mechanics

A postdoctoral research scientist position is available in the laboratory of soil mechanics at the Swiss Federal Institute of Technology, Lausanne (EPFL). The successful candidate will work on various topics related to environmental geomechanics. The candidate will be responsible for developing and performing research in the context of the laboratory projects and activities including experimental work, theoretical and computational geomechanics, as well as scientific programming and simulation. Personal initiative and independent research tasks related with the candidate's interests will be encouraged. Other activities will include interaction with PhD and Ms students and participation in teaching.

A recent PhD in soil mechanics or a related field is required. Qualifications include a strong background in civil engineering and continuum mechanics, along with scientific publications.

Information about the laboratory and its current research can be found at <http://lms.epfl.ch/en>. We are offering excellent facilities and competitive salary commensurate with candidate's records and experience. This position provides unique research opportunities and international networking. The position has an initial one-year duration which is renewable depending on performance. It is available immediately or upon agreement and is open until filled.

Suitable, highly-motivated candidates should send electronic applications (as a single PDF) to the email address below with copy to [karine.barone@epfl.ch](mailto:karine.barone@epfl.ch). The application file will include a cover letter describing interests and qualifications for the position, a complete curriculum vitae, and names and (e-mail) addresses of two referees.
