Soil Engineering forms part of the Technology division of VINCI Construction UK Limited.  
VINCI Construction UK forms part of VINCI, the world's leading construction and concessions company.

## Soil Engineering Technical Services

Soil Engineering Technical Services (SETS) will manage your project from inception to completion, encompassing desk study, Phase II design and implementation, laboratory testing and interpretative report services.

In an industry where legislation and guidance changes frequently, wouldn't it be reassuring for a single organisation to be responsible for all below and above ground investigation and design?

Due to an ever increasing demand in the geo-environmental marketplace for such a service, Soil Engineering Technical Services (SETS), offers a complete advisory service on geotechnical and environmental issues.

By harnessing both geotechnical and environmental staff within the company, SETS is able to offer clients a 'One Stop Shop' approach to projects of varying complexity.

Soil Engineering Technical Services has a track record built up over several years, of offering its services to both the UK geo-environmental market and to its parent company, the VINCI group. The unit has quickly built up a portfolio of diverse and challenging projects encompassing all aspects of geo-environmental engineering.

SETS offer a tender evaluation service which allows the team to summarise construction data into a format that identifies potential risk at an early stage. Coupled with the ability to deliver cost savings during ground works in relation to foundation design and the characterisation of waste, this makes the SETS team a valuable addition to any project.

### SETS offer the following full range of services:

- Tender evaluation services
- Phase I desk studies
- Phase II investigation design
- Phase II investigation implementation
- Geotechnical interpretative reports
- Environmental interpretative reports
- Waste Acceptance Criteria testing
- Remediation statements
- Validation of remedial works
- Ground gas modelling
- Quality sampling service
- Short and long term monitoring

**SETS:**  
**Making the ground work for you.**
