Soil Engineering forms part of the Technology division of VINCI Construction UK Limited.
VINCI Construction UK forms part of VINCI, the world's leading construction and concessions company.

Soil Engineering Ground Investigation Services

With nearly 50 years experience, Soil Engineering Ground Investigation Services has one of the largest resources of company owned, operated and maintained drilling and field equipment in the UK.

Soil Engineering Ground Investigation Services offers UK wide coverage operating from a central head office in Leeds with regional offices in Leighton Buzzard, Bristol and Livingston.

Backed by a large team of drilling crews, site supervisors, field technicians and geo-environmental Engineers, all supported by a very experienced geotechnical management team, Soil Engineering Ground Investigation Services are able to deliver projects of the highest quality, operating over fifty in-house drilling and boring units.

The Company has the enviable record of delivering some of the most complex and technically challenging ground investigations undertaken in the UK. Soil Engineering work across all environs, both on land and overwater, forming exploratory holes up to 250m in depth and using a variety of exploration methods including the sophisticated wireline "Geobore S" triple tube drilling system.

Soil Engineering are at the forefront of the industry combining conventional investigation methods with innovative techniques for data capture, acquisition and interpretation, bringing a new dimension to the field of ground investigation. Recent innovations have included Core Scanning and Instrumented Drilling.

With a truly flexible approach, Soil engineering are able to provide a bespoke service to fulfil our customers recruitments; the company has yet to encounter a site too difficult to investigate and no investigation is considered either too small or too large to tackle.

Capabilities for ground investigation include:

- Health & Safety supervision
- Cable Percussive Boring
- Rotary Drilling
- Dynamic Sampling and Probing
- Instrumented Drilling (DPR)
- Environmental Sampling
- Trial Pitting and Trenching
- Deep Shaft Formation
- In Situ Testing
- Core Scanning
- Installation of Ground, Ground Water and Ground Gas Monitoring Devices
- Sampling and Monitoring of Installations, Including Data Logging

Soil Engineering are ISO 9000 accredited, ensuring high quality, effective ground investigations carried out in accordance with our very strict Health, Safety and Environmental protocols
