

NATCOR

A National Taught Course Centre in Operational Research

NATCOR is a collaboration between six universities to develop and deliver taught courses in Operational Research (OR), mainly intended for PhD students in their first two years of doctoral study.

The initiative to develop such taught course provision came from the EPSRC and is part of a drive to deepen and broaden PhD studies in the UK across the mathematical sciences.

NATCOR will offer the following courses during 2011:

- ◆ **Stochastic Modelling**
Lancaster University
4 – 8 April 2011
- ◆ **Simulation**
The University of Warwick
4 – 8 July 2011
- ◆ **Combinatorial Optimisation**
University of Southampton
12 – 16 September 2011

NATCOR has resources to support attendance at its courses by students whose doctoral work is supported by EPSRC.

“NATCOR has broadened my knowledge of O.R. and has helped me understand areas in my own PhD research”

“Having the opportunity to network with other students in O.R. has been a huge benefit to me”
