

Open: Postdoctoral position for SNF project

*'Pathophysiology of rebound: Instability of cerebellar null representation
for ocular motor control and gravity perception'*

We are offering a postdoctoral position for our SNF-projekt 'Pathophysiology of rebound: Instability of cerebellar null representation for ocular motor control and gravity perception' in the group of Prof. D. Straumann at the Vestibulo- Oculomotor Lab at the Neurology department of Zurich University Hospital. For the functional imaging part of this project, we are looking for a PhD with specific background in fMRI of ocular motor control. Core of the fMRI part of the project is the investigation of central, specifically cerebellar ocular motor disorders with functional imaging techniques. Start of the project will be latest March 2011. Duration of this part of the project will be around one to two years. A medical background and fluent German speaking are welcome.

If you are interested in this position or if you have any further questions, please mail to the main investigator of the project, Sarah Marti, M.D. (Sarah.Marti@usz.ch).
