A 1-day conference on the challenges and opportunities facing the Scottish minerals industry FIRST CIRCULAR AND CALL FOR PAPERS

Scotland is endowed with a wide range of indigenous mineral resources which contribute significantly to the Scottish economy through provision of its energy, constructional and specialist mineral needs.

This conference is being organised jointly by the Mining Institute of Scotland (MIS) and the Central Scotland Regional Group of the Geological Society (CSRG). It will take a forward look at the scientific, economic, operational, technical, environmental and regulatory challenges facing the georesources industries in Scotland, and will explore opportunities for the minerals sector through new technologies, demands and commodities.

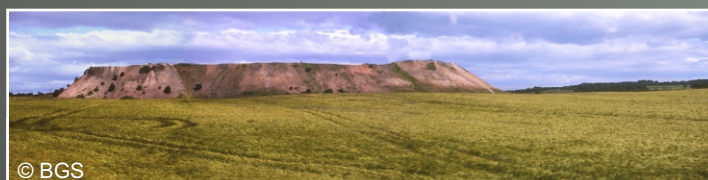

Main themes of the conference

- Energy - from fossil fuels to geothermal
- Minerals - precious, specialist and industrial
- Stone - for development and construction
- The future - how will the industry change?

Who should attend?

Those involved in exploration for and development of mineral resources, the extractive industry, local authority planners, environmental consultants, national government and NGO's, and researchers in related fields such as carbon capture.

The one-day conference will be held in Murchison House, Edinburgh, the Scottish headquarters of the British Geological Survey.
