

This workshop is designed as a place to network with people from different backgrounds and expertise with regard to electronic portfolio, a fast emerging topic on the international horizon of higher education. Bring your current developmental project, your ideas, or simply your creative energy and join others doing their homework in figuring out how to implement and use ePortfolios to improve individual reflective practice, digital learning, and institutional assessment across higher education. Let yourself be inspired by posters, workshops, and Open Space facilitated by experienced ePortfolio practitioners and specialists. Listen to international leaders of the ePortfolio community while they provide you with latest trends in the development of answers to pressing needs with regard to literacy management in an ever changing global knowledge economy.

Instead of providing one rigid structure for all participants, this workshop suggests different ways of spending your time during the event based on whatever you currently need and want to do. See program design at:
