

The Institute of Medical Biometry and Medical Informatics at the University Medical Centre Freiburg has openings at the German Cochrane Centre (GCC) for a

**Researcher (100%)
for projects in the field of 'Evidence Based Health Care Research'**

The German Cochrane Centre (GCC) is the representative of The Cochrane Collaboration in the German-speaking countries. Our tasks include the core functions of the GCC (see www.cochrane.de) and the conceptual design, realisation, evaluation, publication and presentation of research projects on aspects of evidence-based medicine and the methodology of systematic reviews. We are looking for colleagues who work in an independent and cooperative fashion and enjoy being part of in an interdisciplinary and multilingual team.

We expect:

- an academic degree in the field of health care (e.g. medicine, clinical epidemiology, public health, biometry)
- experience with scientific research standards/conducting research/working methodically
- experience with the conceptual design and realisation of research projects
- experience in the area of evidence synthesis and 'knowledge transfer'
- commitment to research and training
- cooperation in research projects

We offer:

- a dynamic-, work environment in an international team
- excellent opportunities for connecting with international working groups and new research developments in evidence-based medicine
- international networking opportunities within The Cochrane Collaboration
- all the opportunities associated with a university position
- a workplace in a city with a high quality of life

For more information please visit us at www.cochrane.de

The position (100%) is open immediately and limited to one year with the option of an extension. The salary is standard rate. Please send your application until 20th of September 2011 to:
