Reserve by September 30th for group rate

Round trip shuttle between the hotel and meeting facility provided

Learn through a variety of teaching styles and small-group sessions

Course objectives:

- To understand the basic principles of guideline methodology, including how to critically appraise the evidence, grade the quality of the evidence, and move from evidence to recommendations
- To increase one's knowledge of the GRADE approach as a framework for guideline development that incorporates all-important aspects of decision-making
- To acquire a familiarity with the GRADE software (GRADEpro) and to create an evidence profile for a therapeutic intervention based on a systematic review.

Participants are encouraged to bring current projects for discussion

Bella Collina

Strengthen your understanding of evidence assessment and recommendation development. Improve techniques for applying GRADE to your current projects.

Workshop Overview

participants must choose one of the two tracks

TRACK 1: Comprehensive Track

appropriate for persons interested in learning the principles of evidence-based medicine and guideline development:

1. Become familiar with the elements of GRADE
2. Create an evidence profile
3. Learn critical evidence appraisal techniques

TRACK 2: Methodologists Track

appropriate for persons who have advanced evidence-based medicine skills; or have completed a basic GRADE workshop; or have experience in leading guideline development activities:

1. Create evidence profiles with binary and continuous outcomes
2. Use different scales
3. Explore advanced evidence-based medicine concepts

Preliminary Schedule:

Wednesday, October 29th

12:30 pm Registration

1:00 pm – 5:00 pm Plenary and GRADE Overview

Thursday, October 30th

8:30 am – 5:00 pm training (Lunch Break included)

Friday, October 31st

8:30 am – 1:00 pm hands-on training
