The importance of early years, childhood and adolescence: Evidence from longitudinal studies

Monday 30 November 2015

British Library Conference Centre

Keynote Speaker

Professor Linda Adair, Nutrition Epidemiology Division,
University of North Carolina

This inter-disciplinary conference showcases outstanding longitudinal research on how early life influences our health, education, employment and other outcomes. Delegates will have an opportunity to:

- hear from leading experts from across the social and biomedical sciences
- consider the potential for cross-study comparisons in your own research
- network with colleagues from across disciplines, sectors and locations
- hear about the latest resources for research.

Following the conference, Professor Ian Deary will give a public lecture on the **Secrets of Staying Sharp in Older Age**. Conference registration includes attendance at the public lecture and drinks reception. Limited student places available.
