S-K. Lai,
National Taipei University, Taiwan

Associate Editors

H. Han, Zhejiang University, China

T. T. Neaves, George Mason University, USA

P. Nijkamp, Vrije Universiteit Amsterdam, The Netherlands

Journal of Urban Management is particularly interested in theoretical work and applications that are targeted at urban management in, but not limited to, Mainland China and Taiwan.

The year of 2007 marked a special moment. More than half of the world population now lives in cities globally. In Mainland China, rapid urbanization has taken place since the economic reform in 1978. Managing **urban complexity** effectively will thus be one of the most challenging tasks faced by human beings for the 21st century.

The term urban management is defined broadly here to cover studies and research in **regulating, governing, planning, and administering** urban complexity or cities. The urban phenomena that are of interest cut across ecological, physical, economic, political, and social settings, with a belief that these settings interact with each other and should be treated as a whole.

Journal of Urban Management publishes two issues per year and we accept manuscripts throughout the year.
