

# Introduction to Realist Evaluation and Synthesis

Wednesday 25<sup>th</sup> December 2017

2pm-3.30pm

**Location:**

Lecture Room G04,

Cypress Building,

Chatham Street,

University of Liverpool, L69 7ZR

---

## Presentation by Dr. Justin Jagosh (University of Liverpool)

Realist methodology (evaluation and synthesis) is a theory driven approach to uncovering ‘what works, for whom, under what circumstances and how’ in the evaluation of interventions, programmes and services.

The general process in conducting a realist project is to theorize upon the intervention under investigation, develop and use protocol to collect data, and analyse using context-mechanism-outcome configurations.

This interactive seminar will introduce the basic concepts in realist methodology with a few examples followed by questions and discussion.

*\*Justin Jagosh is Director of the [Centre for Advancement of Realist Evaluation](#)*
