

## Job offer

<b>Position</b>	<b>Junior project manager in crystallography (M/F)</b>
<b>Start of contract</b>	June 2018
<b>Type of contract</b>	Temporary contract of 6 months
<b>Employer</b>	<p>NovAliX is a French contract research organization of 120+ employees providing expert driven innovative outsourcing and insourcing research services for drug discovery. NovAliX offers to the pharmaceutical industry a complete range of services spanning Biophysics, structural Biology, Chemistry &amp; Drug Discovery.</p> <p>The position is based in Saclay, Essonne (South of Paris-France).</p>
<b>Job description</b>	<p>You will join our structural biology insourced team located on the Synchrotron SOLEIL to manage projects for our client in the field of structural biology. Your work will consist in:</p> <ul style="list-style-type: none"> <li>- Conducting crystallographic projects from bibliographic work to structure determination, as well as project follow-up, clients reporting, drafting procedures and/or reports.</li> </ul> <p>You will be in charge of protein production and purification from different expression systems, X-ray diffraction data collection &amp; processing, structure determination of proteins of interest and of protein-ligand complexes.</p>
<b>Profile</b>	<p>You should have a PhD in crystallography. A good knowledge of software packages employed in protein crystallography is a must. Additional experience in molecular biology and/or insect cells culture and characterization of protein/ligand complexes would be an asset.</p> <p>We are seeking a person who speaks fluently English and French, who is passionate about structural biology and who has a keen sense of responsibility as well as being a committed team player. The candidate will have a rigorous and organized attitude to work with reporting skills.</p>
