

With about 20,000 students, around 2,000 staff members - of which about 1,300 are scientists - the University of Siegen is an innovative and interdisciplinary-oriented university. With a broad range of subjects from humanities and social sciences to economic sciences to natural and engineering sciences, it offers an excellent teaching and research environment with a large number of inter- and transdisciplinary research projects. The University of Siegen offers diverse possibilities to reconcile career and family. Therefore, it has been certified as a family-friendly university since 2006 and offers a Dual Career Service.

The University of Siegen, Faculty II, Department for Clinical Psychology invites applications for a **full-time position** of a

Senior post-doctoral Researcher (m/f)
(pay category 13 TV-L)

with a flexible **starting time of 01.12.2018** or later for a **fixed term of three years**. The project is third-party funded and as such relies on the respective allocation of funds. The possible length of employment is subject to the German Act on Temporary Employment in Higher Education.

Your tasks:

- Research on “Neural correlates of fear conditioning, extinction and psychophysiological processing of affective stimuli.”
- Working on publications in relevant high impact, peer-reviewed journals
- There are further opportunities to engage in research and publication activities within our other ongoing projects, such as in the areas of psychoendocrine stress research, eye-tracking and imaging genetics

The position is intended to facilitate your academic development and qualification (preparation for assistant professor positions). You will be given the opportunity for this as part of your employment.

The project:

- The aim of the project is to investigate the differences and similarities between different times of extinction learning by using fMRI. The 3-T MRI scanner is located at the Bender Institute of Neuroimaging in Giessen. Thus, most working time will be located in Giessen.
- The project is financially well-equipped and includes resources for hiring further staff, travelling -costs and publication costs

Your profile:

- PhD in psychology or in another field relevant to the project
- University degree (diploma, bachelor's degree, master's degree) in psychology or in another field relevant to the project
- Ideally, you should have:
 - Experience in fMRI analyses and research
 - Computer programming knowledge (please specify the programming language(s) (e.g. MATLAB) and your respective level(s) of experience)
 - Good command of English

The University of Siegen strives to increase the proportion of women in research and teaching. Women with relevant qualifications are explicitly asked to apply for the position. Furthermore, severely disabled persons with relevant qualifications are asked to apply for the position.

Further information is provided by Prof. Dr. Tim Klucken Phone:+49/271/740-4106
