

MA Digital Humanities

Developments in the use of digital technologies are transforming the ways we live and work. Information technology is increasingly dominated by sources such as digital texts, images, and maps. Our aim is to turn humanities students into the best people to analyse these sources in academic research and in the wider world of employment.

Whether you want to continue in academia with the skills to drive pioneering work in your subject, or develop a career that combines cutting-edge IT skills with the traditional strengths of a humanities graduate – in careers as diverse as the creative industries and the heritage sector – Lancaster’s MA Digital Humanities will transform your understanding of how digital technologies can be used. We assume no particular expertise in computing.

- **Be part of Lancaster University’s world-leading Digital Humanities Hub**
- **Work with our top academics who lead the field in Digital Humanities, and whose teaching is fuelled by the latest research**
- **Study a combination of digital skills and traditional humanities courses with the flexibility to choose the focus of your Masters programme**
- **Benefit from our strongly interdisciplinary focus by taking courses from across the Faculty of Arts and Social Sciences, including the Departments of History, English Literature & Creative Writing, and Linguistics & English Language.**
- **Through our optional heritage placements programme, work with partners in the cultural heritage or business sectors as part of your degree and put your digital skills into practice**
- **Join the university ranked 6th in the UK overall, and 3rd in the UK for graduate prospects, by The Times and Sunday Times Good University Guide 2019**
