Overview

The collaborative research center “Re-Figuration of Spaces” at Technische Universität Berlin investigates changes in contemporary spatial arrangements with an emphasis on digital technologies and transnationalization. The goal is to determine the characteristics of the so-defined “re-figuration of spaces”. In order to achieve it, we examine a variety of subjective spatial experiences and knowledge production practices. This includes a more thorough examination of how emerging spatial structures are conditioned by increased interconnectedness of places and the circulation it implicates. Our conference thematizes how spaces change through mediatization, increased mobility, globalization and social dislocation. We ask which forms of arrangements, spatialities and materialities underwrite these processes. How are spaces negotiated and (visually) communicated? These questions will be addressed by international lecturers and discussed in plenary and parallel sessions.

WEDNESDAY, FEBRUARY 20, 2019

10:00 am-13:00 pm

City walks

3:00-4:00 pm

Opening Lecture: Re-Figuration of Spaces

4:15-6:00 pm

Plenary Session 1: Spatializing Contemporary Modernities and the Postcolonial Challenge

THURSDAY, FEBRUARY 21, 2019

9:00-10:45 am

Plenary Session 2: Visualization and Urban Space

11:15 am-1:45 pm

Session 1: Spatiality and Public Spheres

Session 2: Security, Control and Power

Session 3: Translocal Planning?

3:00-5:30 pm

Session 4: Materiality, Affordance, Re-figuration: Planning and Appropriation of Urban Space

Session 5: Spatial In-/Exclusion. Global and Local Perspectives on Spatial Inequality

6:00-7:30 pm

Keynote Lecture: Thinking Across Scales: From Place-Based Community to Large-Scale Social Integration

FRIDAY, FEBRUARY 22, 2019

9:30-12:00 am

Session 6: Entanglements of Space and Time

Session 7: Urbanity, Migration, Mobility

1:30-3:15 pm

Plenary session 3: Space, Labor and Economy

3:45-5:30 pm

Plenary Discussion: Interdisciplinarity in Spatial Research

Wednesday, February 20, 2019

10:00 am-13:00 pm

City walks (upon reservation)

3:00-4:00 pm

Opening Lecture

Room 3005

Session Abstracts

Plenary Sessions

Plenary Session 1: Spatializing Contemporary Modernities and the Postcolonial Challenge

Intensifying global connectedness produces new financial and material flows, new patterns of migration, and new translocal practices. Yet, the euphoria around an open and connected world is clouded by the increasing awareness that the flip side of the opportunities linked to uninhibited flows is the production of uneven urban geographies - an increase in inequity, discrimination and exclusion which manifest on multiple scales and reinforce (post-) colonial divisions. The session reflects on contemporary theorisations of urbanity, citizenship and urban politics in the context of an increasingly globalising world. How can academic research contribute to build knowledge of emerging practices and agencies that circumvent the pitfalls of postcolonial divisions? How can we build a global theory of urbanity in face of and grounded in the diversity of emerging translocal realities?

Plenary Session 2: Visualization and Space

Spaces are mediated through visualizations, marketed and made tangible in a specific way. In the session we discuss how spatial changes translate into images. It is important to discuss when spatial images change and thus suggest new spatial experiences and when a re-figuration of spaces becomes solidified in new visual expressions.

Plenary session 3: Space, Labor and Economy

Since Adam Smith's "The Wealth of Nations", it is a well-known fact that economic growth is rooted in the increasing division of labor. This division of labor had manifold spatial consequences from concentration of labor in Victorian factories, dispersion of labor in industrial districts towards a currently-created individual organization of work in an almost borderless world where anything seems to be possible. At the same time, labor is divided globally into certain patterns between the Global North and South. The panel contributes to this debate by asking: How is this relationship (space, labor and economy) currently re-figured? Did the mobility of labor really increase in this realm, making labor less sticky? How is space re-figured in labour economies or economics of labour? What do we know about the patterns of re-figuration in novel work environments (e.g. co-working spaces, labs etc.)?

Parallel Sessions

Session 1: Spatiality and Public Spheres

The session focuses on the role space plays in the formation of public spheres. To what degree are actors and topics locally bounded vs. translocally distributed? Does online communication influence the constitution of spaces offline? In what ways do actors push certain perceptions of spaces to advance their strategic goals?

Session 2: Security, Control and Power

Since the 1970s, security has increasingly come to the fore in legitimising political, economical and technical procedures effectuated in certain spaces, for example, the surveillance of dangerous zones in cities. By the same token, subjective uncertainty has been progressively gaining significance, thereby permeating identity politics. Similarly, security, in the social sciences, is discussed as a specifically late modern mode of power. The session, against this backdrop, addresses the change towards (in) security - both on a subjective level and in relation to communicative structures - and traces its concomitants spatial transformations. To that end, the session is structured around the following questions: How is the term (in)security conceptualised in social theory and how can it be useful for empirical research? How do spatial rearrangements affect (the perception of) (in)security? What kind of spatial (trans)formations does the notion of (in)security prompt and require? How do feelings of (in)security relate to structural changes and the reorganisation of social order? While seeking possible open-ended answers, special heed will be paid to cultural difference.

Session 3: Translocal Planning

What is the role of planning practices within new spatialities emerging with the circulation people and things and with digitalization? How are planning practices driving and how are they affected by the ongoing re-figuration of spaces from national-territorial registers to multidimensional-relational registers? A particular concern for this session is in which ways planning practices themselves become translocalized. How does the doing of planning change with (a) locally distributed and digitally mediated work processes, (b) increasing circulation of know-how and certain centrally composed models, tools and procedures, (c) multiplication of contexts within which planning practices are situated, from the local place to shaped, via political-administrative contexts of regulation, the context of specific issues such as gentrification, migration, sustainability, surveillance, participation, all the

way to (d) contexts of expert knowledge on planning itself, where specific approaches and professional standards are developed and cultivated.

Session 4: Materiality, Affordance, Re-figuration: Planning and Appropriation of Urban Space

This session is designed to investigate new relationships between humans and urban space in the context of contemporary social changes. In order to examine the scope and specificity of these shifting relations, the session looks at applications of a series of intertwined concepts: materiality, affordance, re-figuration. In particular, we would like to tackle the following question: What are the emerging practices of planning, appropriation, collaboration and conflict in these new relations? The significance of this question will be assessed especially in the contexts of increasing mediatization of social life, presence of translocal networks, global dynamics in the production of local space, and changing constellations of actors.

Session 5: Spatial In-/Exclusion: Global and Local Perspectives on Spatial Inequality

This session brings together scholars that analyze in-/exclusionary practices in the re-figuration of space. The re-figuration of space is strongly related to material but also symbolic in- and exclusion with significant repercussions for the structure of social inequality. To shed light on these developments, the session aims at a juxtaposition of local and global perspectives on spatial in-/exclusion. Which practices and categories are utilized to achieve in- or exclusion? Are they working on a specific scale such as the local/global or are they bridging such a conceptualization? What are implications for the structure of social inequality and space? We invite scholars to present empirical findings that come from a range of areas and scales.

Session 6: Entanglement of Space and Time

It has been long-known that space and time are entwined. For example, spatial constructions change over time, humans interact in space and time, it takes time to cross space, people's way of thinking about space and time are systematically linked, and so on. The panel contributes to this debate by asking e.g.: How are constructions of space and time related? How are these relationships currently re-figured? How is space re-figured over time? What do we know about the patterns of re-figuration?

Session 7: Urbanity, Migration, Mobility

The session asks how new forms of migration challenges our understanding of urbanity. Papers will focus on the

every day urban practices of neighbourhood residents, commuters and also marginalized actors such as villagers of rural hinterlands and refugees. What tools and strategies do these actors mobilise to navigate translocality? How does multidirectional migration and new patterns of mobility reconfigure urban space and materialities, forge new spatial knowledge and urban practices and build new translocal alliances?
