As scholars of color, we know that understandings of race and racial inequalities have always been at the center of debates about technology, politics, and power. We designed our first syllabus to provide a broader context for understanding current conversations around technology and democracy by centering the voices and scholarship of people of color. The set of readings included here focus primarily on racial formations in a U.S. context and provides curated introduction to the myriad ways that race has shaped aspects of our digital world—from the infrastructures and policies that support technological development, to algorithms and the collection of data, to the interfaces that shape engagement.

We then highlight the vast body of scholarship on how communities of color have deployed new media in ways that expand the public sphere, contest the status quo, and give voice to their creativity, passion, and desires. This syllabus represents research that has been foundational in developing the field of critical race and digital studies since its origins in the 1990s and cutting edge scholarship that can help us to tackle emerging changes and shifts in the media landscape. We invite anyone who is interested in the topic to check out the readings on the list.

Background: Datafication of identity from the 1900 U.S. Census; enumerators for 'color or race' were W for White, B for Black, Ch for Chinese, Jp for Japanese, or In for American Indian. Prior to computation, the Census Bureau used tabulators, to display data.
