

Announcing a new series

BLOOMSBURY ADVANCES IN ECOLINGUISTICS

SERIES EDITORS:

Arran Stibbe (University of Gloucestershire, UK) & **Mariana Roccia** (International Ecolinguistics Association, UK)

ADVISORY BOARD:

Nadine Andrews (Lancaster University, UK)

Maria Bortoluzzi (University of Udine, Italy)

Martin Doering (University of Hamburg, Germany)

Sue Edney (University of Bristol, UK)

Alwin Fill (University of Graz, Austria)

Diego Forte (University of Buenos Aires, Argentina)

Amir Ghorbanpour (Tarbiat Modarres University, Iran)

Natalia Goshlyk (Vasyl Stefanyk Precarpathian National University, Ukraine)

Huang Guowen (South China Agricultural University, China)

George Jacobs, Independent Scholar

Kyoocheon Kim (Daegu University, South Korea)

Katerina Kosta (Oxford Brookes University, UK)

Mira Lieberman-Boyd (University of Sheffield, UK)

Keith Moser (Mississippi State University, USA)

Douglas Ponton (University of Catania, Italy)

Robert Poole (University of Alabama, USA)

Alison Sealey (University of Lancaster, UK)

Nina Venkataraman (National University of Singapore, Singapore)

Daniela Francesca Viridis (University of Cagliari, Italy)

Sune Vork Steffensen (University of Southern Denmark, Denmark)

Bloomsbury Advances in Ecolinguistics emerges at a time when businesses, unions, universities and national governments are declaring an ecological emergency. With climate change and biodiversity loss diminishing the ability of the Earth to support life, this new series explores the role that linguistics can play in addressing the great challenges faced by humanity and countless other species. The series treats language as an intrinsic part of both human societies and wider ecosystems and explores what different areas of linguistic enquiry, such as discourse analysis, corpus linguistics, language diversity and cognitive linguistics, can become at a time of ecological emergency.

Books in the series explore a) emerging theoretical frameworks such as Harmonious Discourse Analysis, b) the relationship between linguistic diversity and biodiversity, c) the use of linguistic analysis in ecocriticism and other ecological humanities and d) the stories that underpin unequal and unsustainable industrial societies. The books also look to cultures around the world for inspirational forms of language that can lead to new stories to live by. In this way, the series contributes to linguistic theory by placing language fully in its social and ecological context, and to practical action by showing how linguistics can play a role in the transition to an ecological civilisation.

We welcome proposals for new books

For more information or to discuss an idea for a book in the series, please contact either the Series Editors or Publisher:
