Additional Comments: The suitability of the venue for the event

Unfortunately the room next to where the event was happening was occupied by students who were very noisy. They did quieten down when someone asked them to though.
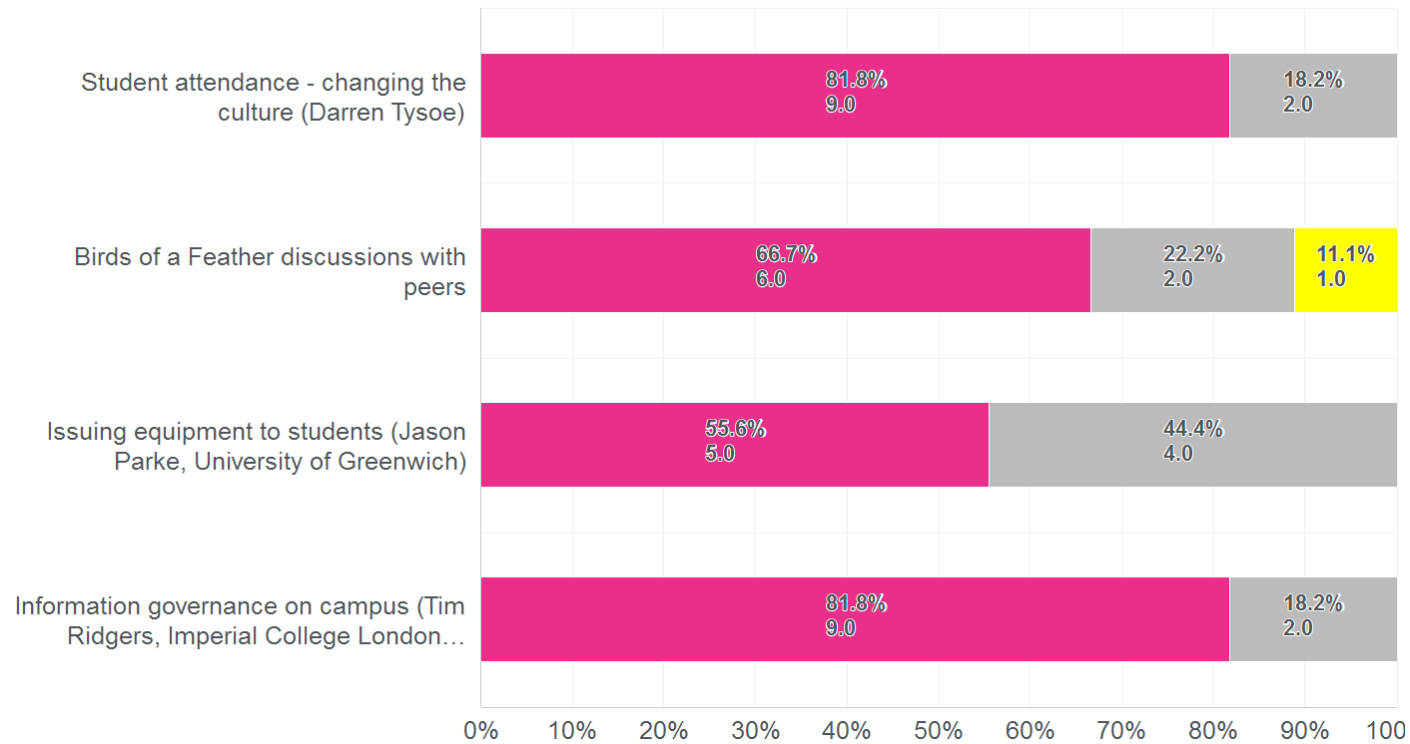

Additional Comments: The catering

Best sandwiches I've had in a long while, and certainly the best I've ever had at any work-related event!

Could have had more structure

Session was very useful

Additional Comments: Issuing equipment to students (Jason Parke, University of Greenwich)

I delivered this so can't comment :)

Sprung some thoughts for me.

Additional Comments: Information governance on campus (Tim Rodgers, Imperial College London)

Went a little over my head.

What did you enjoy the most?

The whole day was great. Bird of a feather sessions also really good.

Presenting!

Digital strategy birds of a feather conversation

The first presentation on student attendance was really well delivered and very informative - it was probably my favourite part of the day. That said, the lunch was superb!

Networking

The session at the tables

Tim's session

Regent University Presentation & Discussion Group/

This event really provided a great opportunity to meet colleagues from other institutions - this was my first time attending a UCISA London event and being new to the HE sector too I found it very interesting to hear of some of the challenges facing organisations and equally hearing about some of the solutions which have been implemented to address challenges.

Informal topic discussion

What did you enjoy the least?

N/A

All good - useful session

The chairs :-)

The topics didn't seem overly innovative and some of the contributions (not from speakers) seemed to be for ego boosting rather than value or sharing which didn't make it feel like an inclusive space

.

Any additional comments:

Thank you very much, it was my first UCISA event and I found it really enjoyable and very, very useful!

Possible topics for a future event:

Fee collection systems

Innovative approaches to Information Governance/InfoSec through an organisation
Staff/student collaboration in successful InfoSec/IT projects

System Integration
